SUMMARY

Java Full Stack Developer Intern with hands-on experience in building and enhancing live production web applications. Skilled in Java, Spring Boot, Spring MVC, Hibernate, and JPA with practical knowledge of RESTful APIs, Spring Security, and role-based authentication. Experienced in developing backend systems, managing database operations, and integrating frontend components using Thymeleaf, JavaScript, and AJAX. Familiar with JWT, JSP, Servlets, and Java Stream API. Currently pursuing MCA final semester and seeking a full-time opportunity to apply my skills in software development and contribute to scalable enterprise applications.

SKILLS

Front End: HTML, CSS, JavaScript, jQuery, AJAX, Thymeleaf, JSP (Dynamic UI Integration)

Backend: Java, Core Java (OOP, Collections, Exception Handling), Spring Boot, Spring MVC, Spring Security, RESTful APIs

ORM & Persistence: Hibernate, JPA, JDBC

Database: MySQL, Microsoft SQL Server (MSSQL), SQL (Joins, Indexing)

Architecture: MVC Architecture , Secure Role-Based Design

Tools & Platforms: IntelliJ IDEA, Postman ,Maven

EXPERIENCE

Java Full Stack Developer

e-procurement technologies limited

January 2026 - Present, Ahmedabad

- Contributed to the development and enhancement of a live gold auction platform used for bidder onboarding, auction participation, and packet management workflows.
- Designed and developed a complete Bidder Dashboard enabling bidders to track auction activities, manage packets, and update winning packet statuses securely.
- Implemented secure winning packet update functionality with validations to prevent duplicate or unauthorized multiple updates.
- Developed the complete EMD Refund Request Workflow, allowing bidders to raise refund requests, followed by multi-level validation and approval by Officers and Finance users until final settlement.
- Built auction-based and client-based Inspection Letter Management workflows, including officer-driven uploads of initial bidder lists with automatic bidder mapping for AuctionTiger auctions and manual bidder mapping for client-specific auctions.
- Implemented bidder validation logic with conditional verification rules-
- Full bidder validation for AuctionTiger-based uploads.
- Email-based validation for client-specific bidder uploads.
- Developed bidder synchronization functionality to import bidder data from external portals into the eGold Bidder system.
- Implemented automated login credential generation and secure email delivery workflows for bidders, officers, and finance users.
- Designed and implemented secure session-based authentication and role-based access control using Spring Security and @PreAuthorize for SUPER ADMIN, Officer, Finance, and Bidder roles.
- Developed a PDF generation engine using iText to generate multi-page inspection letters with dynamic bidder details, verification codes, signatures, terms & conditions, and branded layouts.
- Implemented secure file upload, validation, soft-delete, ZIP export, transactional rollback handling, and audit-friendly workflow management.
- Integrated frontend modules using Thymeleaf, JavaScript, jQuery, and AJAX with CSRF-secured API communication and dynamic rendering.
- Applied layered architecture and transaction management practices across controller, service, and repository layers in a production-grade application.

PROJECT

Hackathon Management System

Gujarat Vidyapith Ahmedabad • github.com/manishdesai17/Hackathon-Management

- Developed a web-based Hackathon Management System using Java, Spring Boot, MySQL, Hibernate, and Thymeleaf to manage end-to-end hackathon workflows for organizers, participants, and judges.
- The system allows organizations to create hackathons and enables students to form teams (up to 5 members) and register for specific events. Implemented a structured workflow where teams submit documentation or code based on hackathon requirements, and organizers validate submissions before approval.

- Designed three-role architecture (Admin, User, Judge) with secure role-based access control using Spring Security. Admin manages hackathon setup and validates team submissions, while organizers review documentation and approve eligible teams for participation. Judges evaluate submitted projects and assign rankings (Rank 1, 2, 3) based on analysis and design quality.
- Implemented notification system to send email credentials and participation updates to selected teams. Built frontend interaction using Thymeleaf, jQuery, and AJAX for dynamic and responsive user experience.
- Ensured secure and efficient backend operations using Hibernate ORM and MySQL database for managing users, teams, hackathons, submissions, and results.

EDUCATION

Master of Computer Applications

Gujarat Vidyapith Ahmedabad • Ahmedabad • 2026

Bachelor of Computer Applications

Smt. B. K. Mehta IT Centre BCA College • Palanpur • 2024 • 8.28

CERTIFICATIONS

Odoo x Gujarat Vidyapith Hackathon 2025 – Volunteering Certificate

Gujarat Vidyapith Ahmedabad • 2025
